

Boost Productivity

- Automatically configure your equipment by using machine programs and parameters for specific work steps
- Motivate your sewers by showing Target/Cycle times, as well as Performance, Quality and Availability Targets/Achievements at the workplace
- Educate your workers by making best practices available
- Identify bottlenecks in the moment they appear

Increase Availability

- Make availability loss visible by getting direct feedback from the workplaces
- Decrease machine downtime by solving errors faster
- Significantly reduce set up times by distributing your machine settings from one machine to all the others
- Shorten service times by having machine updates centrally available
- Use machine status information to get real time feedback about the utilization of your equipment

Improve Quality

- Guide your operators by making work plans and individual advices/media available at the workplace
- Prevent manipulation of sewing parameters
- Be able to make sure that rework is documented properly
- Make sure that production parameters in your production sites match the parameters designed in your development factory
